Definition, Examples, and
Practice Problems You may
already know that in the
study of genetics, dominance
refers to the relationship
between alleles, which are

Where To Download Genetics Practice Problems

two forms of a gene. In a dominant relationship between alleles, one allele "masks" the other and influences a specific trait.

Solving Genetics Problems.

There is no dominant or recessive, the heterozygous condition results in a "blending" of the two traits. Example: Snapdragons can be red, white, or pink

Where To Download Genetics Practice Problems

(heterozygous) Incomplete dominance - neither allele is dominant, red x white = pink
Codominance - both are expressed in some way, red x white = white/red spots

Closely related to
incomplete dominance is
codominance, in which both

alleles are simultaneously expressed in the heterozygote. We can see an example of codominance in the MN blood groups of humans (less famous than the ABO blood groups, but still important!). A person's MN
