Recognized as the leading measure of burnout, the Maslach Burnout Inventory (MBI) is validated by the extensive research that has been conducted in the more than 25 years since its initial publication. The MBI Surveys address three general scales: --Emotional Exhaustion measures feelings of being emotionally overextended and exhausted by one's work. --Depersonalization measures an unfeeling and impersonal response toward recipients of one's service, care treatment, or instruction. --Personal Accomplishment measures feelings of competence and successful achievement in one's work.

This book examines stress in organizational contexts. The authors review the sources and outcomes of job-related stress, the methods used to assess levels and consequences of occupational stress, along with the strategies that might be used by individuals and organizations to confront stress and its associated problems. One chapter is devoted to examining an extreme form of occupational stress--burnout, which has been found to have severe consequences for individuals and their organizations. The book closes with a discussion of scenarios for jobs and work in the new millennium, and the potential sources of stress that these scenarios may generate.

This book provides a comprehensive, updated summary of research evidence on the effects of stressful working and employment conditions on workers' health, as based on one of the worldwide leading theoretical models, effort-reward imbalance. It offers three innovative features that are appealing for research as well as for policy. Firstly, it presents and discusses comparable research findings from different continents, in particular from Japan, China, and Latin America. Secondly, it extends the conceptual framework of research on this topic by analysing associations of work stress with health in a life course perspective, and by linking these associations to the macro-level of national labour and social policies. Thirdly, the book helps to strengthen programs and policies that aim at promoting healthy work locally, nationally, and internationally, by providing solid facts on which such programs can be based.

Business Research Methods is the complete introduction to doing business research and is an ideal guide for students embarking on a research project. Developed specifically with business and management students in mind, this textbook explores the nature and purpose of business research and the issues it entails, while also providing students with practical advice through "Tips and skills" boxes. In addition to a broad range of relevant examples, the book features a substantial discussion of ethics, and a strong emphasis on the most frequent challenges faced by students, such as choosing a research question, planning a project, and writing it up. Fresh voices and perspectives run throughout this edition. New author, Bill Harley, further internationalizes the book's coverage, based on his expertise in the Australian business and management context. Also hear from Amrit, Jordan, Anna, Ed, and Alex - an additional five students whose personal insights and advice in the "student experience" feature help you avoid common mistakes, and follow their successful strategies when undertaking your own research project. This edition has been extensively revised, updated, and streamlined. Coverage of E-Research is now woven throughout the entire book to reflect the centrality of internet-based research methods. The book is accompanied by a suite of online resources that include: For students:* Multiple choice questions* Research Project guide * Interviews with students * Data sets * Using Excel in data analysis (in Excel)* Web links For lecturers:* Test bank* Discussion questions* PowerPoint slides * Lecturer's guide * Case studies * Figures and plates from the text* VLE cartridge

The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done? Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations.

Issues in Family Medicine Research and Practice: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Family Medicine Research and Practice. The editors have built Issues in Family Medicine Research and Practice: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Family Medicine Research and Practice in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Family Medicine Research and Practice: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Various articles are presented covering psychological, sociological and cross-cultural topics or relevance to religious/spiritual researchers and academics.

The phenomenon of burnout first became the subject of public attention in the mid-1970s. This landmark volume is one of the first devoted exclusively to theoretical and empirical work on burnout. Each valuable chapter represents the state of the art in social services research on burnout. Burnout Among Social Workers illustrates and assesses problems with definitions and theoretical orientations to help clarify the overall conceptual vagueness that has plagued burnout research since its beginning. Attention is paid to both personal and job-related variables and coping mechanisms. Expert social work academicians and researchers clearly demonstrate the importance of burnout measurement for theory and practice and establish important guidelines for subsequent research and theory development in this area.
